Gary,

I do not have the information readily available. All my CES files were placed in storage. However, C4 Environmental's Gary Brauchman supervised the sampling/analyses of all the Frac Tanks and ASTs. To best of my knowledge all the Frac Tanks located to east of the ASTs were used to store rain water collected within the secondary containment by CES post the City Of Houston's blockage of effluent discharges from the site. However, when several transport tankers were stolen (one contained Haz Waste) that the thief's attempted to transfer the waste to the ASTs and released/spilled alot of the waste in this area. It was removed, placed on plastic and covered directly south of the location. I am not sure but to the best of my memory, C4 was the contractor that was retained to sample, profile and dispose of the waste stock pile.

The TCEQ and City of Houston Fire Dept all responded to the site and took many photos of which I never received copies. I believe that the TCEQ used one of their contractors to remove and stockpile the contaminated media.

Call or email me anytime and will assist in any way I can.

Mickey

See email below. Can you answer the questions about FT5180?

I am trying to run down the issue of the hydrocarbons in the picture provided.

Thanks,

Gary

Gary:

The attached photo shows the location of the sand that is covering some hydrocarbon impacts. We are going to handle this but we would like to address all areas (if there are any more) that have similar problems. If you have any information, I'd appreciate it so we can scope the work appropriately. I will follow-up with Terry Andrews and see if TCEQ has information about other locations that we should be aware of.

We are making use of the waste data you generated during the removal action to help with the waste unit closures. The waste in several tanks was nonhazardous so those units should not need to be closed as RCRA waste units.

We also have a question about the green frac tank left on the Site (see photo). You said this was owned by CES. The other three tanks (FT-1001, FT-1002, and FT-1004) were waste units listed on the TCEQ Notice of Registration. But we can't match up the green tank, FT-5180, with any of the waste units. The data show it had oily water. Did you have any other information or was this just one of the multitude of frac tanks?

Thanks for your help.

Brenda
